

Can you describe your business and its main operations?

Personal use

What is the main purpose of the application?

Weather, water temp, geo location, - fishing

Who will be the end-users of the application?

Fisherman

Do you have any specific demographics or user personas in mind?

Fisherman

What specific features or functionalities do you envision for the application?

Saved locations, maybe fishing report

Are there features from existing applications you would like to replicate or improve upon?

Fish brain - make it more personal, less community

What are the must-have features for the first version of the application?

Water temp #1, Air temp, wind speed, Iowa/Minnesota

Does the application need to integrate with any existing systems or databases?

USGS database water data, DNR for fishing Reports

How do you envision the application's UI? Preferences regarding the design or layout?

✓

Are there any specific UI/UX considerations? Logo or color scheme?

Dark sage / black outlines - Come up with name + logo

What types of data will the application need to manage?

Temp, Speed, distance, boat ramp locations

How will data be stored and accessed?

Notes, Search, Setting

How will the data be input, processed, and displayed within the application?

Enter Notes, Search

Are there any security requirements or considerations for the application?

No

What level of user authentication and authorization is needed?

No

Are there any performance or scalability requirements we should be aware of?

No

What is your expected timeline for the development of the application?

Sooner the better

Do you have a budget in mind for this project?

Couple hundred

How do you envision the application improving your business processes?

Catch More fish, make a better plan, centralize the needed data

How do you envision the process of providing feedback and making iterations?

Send .exe and

Are there any specific checkpoints you would like to have during development?

No

Will there be any ongoing updates or enhancements required post-launch?

No

Are there any legal or regulatory requirements that the application needs to adhere to?

No

only one form, no login Required
